Lifting tools for MP cone crusher wear parts

Application

Exclusively designed to lift Metso Outotec engineered and supplied crusher wear parts for MP cone crushers.

Our lifting tools for MP cone crusher wear parts are designed with OEM (Original Equipment Manufacturer) expertise, making mantle and bowl liner replacement safer, faster and more efficient.

Tools and parts from OEM

Metso Outotec's specially designed, fit-for-purpose tools make lifting the crusher wear parts more efficient. The tools are manufactured by quality suppliers, ensuring that high standards and tolerances are met. By using OEM parts, you can improve the wear lifetime through a wide range of offering and chamber optimization, and you reduce the lifting risk – in both new and worn condition. As a result, maintenance risk and times are decreased and crushing uptime is increased.

Safe and efficient crusher maintenance

MP lifting tools make the maintenance of your MP cone crusher safer and faster. The lifting tools improve the working conditions of the operator by eliminating the welding process, as there is no need for welding lugs to the wear parts. The MP lifting tools are also easy to use with any lifting crane. All the Metso Outotec manufactured MP lifting tools are quality inspected to ensure maximum performance.

Offering

Our offering includes lifting tools for both bowl liners and mantles. The tools are available for crusher wear parts for the MP800, MP1000 and MP1250 cone crushers.

Benefits

- Improved safety
- Higher efficiency
- Allows for faster mantle and bowl liner replacement for your MP cone crusher
