VPA filter extension kit

The Metso VPA extension kit is a quick, cost-effective solution to maximize your current production performance without changing your existing footprint.

Your filtration capacity should not limit your production process. The Metso VPA extension kit is a cost-efficient way to effectively increase your VPA filter performance and reliability without changing your filter's basic controls or functionality.

The extension kit upgrade provides extra capacity for increased throughput or additional time for scheduled maintenance.

Improved throughput/performance is achieved without any changes to your current filter footprint.

Benefits

- Increased filter capacity
- Improved efficiency
- Maintenance flexibility
- Decreased CO₂ emissions
- Decreased OPEX costs

Scope of supply

- Engineering
- Extension parts
- Filter plates
- Documentation
- Installation (optional)
