

FLOATFORCE® SETS NEW STANDARDS

FloatForce is a new-generation mixing mechanism that delivers measureable value in three key areas of flotation:

**IMPROVED
METALLURGICAL
PERFORMANCE**

**REDUCED
ENERGY
CONSUMPTION**

**LOWER
OPERATING
COSTS**

By improving flotation hydrodynamics and pumping performance at high air dispersion rates, FloatForce technology enhances particle recovery in the flotation cell, while also reducing power consumption, with less risk of sanding.

The FloatForce mechanism comes as standard on all new Outotec flotation solutions, and is also available for existing installations as an upgrade service. More information on how FloatForce technology could add measureable value to your bottom line is [available here...](#)

FloatForce Around the World

Almost one hundred concentrators around the world are already running over 1800 FloatForces across most industrial mineral processing applications. FloatForce references [available here...](#) ■
