

OUTOTEC® ASSET ANALYTICS FOR COURIER™

Outotec Asset Analytics delivers critical event-based equipment condition and operating data for your equipment.

Our Asset Analytics includes a comprehensive equipment health and asset monitoring capability with a wide range of diagnostic and analytic reporting tools.

Identifying potential equipment problems before equipment failure, minimizes unplanned downtime and productivity losses.

Operating costs can be controlled by streamlining service and maintenance schedules.

Asset Analytics is functional across various assets including: analyzers, grinding mills, flotation cells, filters, thickeners and more.

BENEFITS

- Early warning detection
- Universal functionality across numerous assets
- Range of diagnostic and analytic reports
- Minimized unplanned downtime and productivity losses
- Controlled operating costs
- Comprehensive equipment health and asset monitoring

Features

Overview

The overview feature provides a system overview of your equipment, detailing timelines, equipment measurements and active alarms and warnings . You can also select specific parts on the equipment you would like to analyze.

Availability

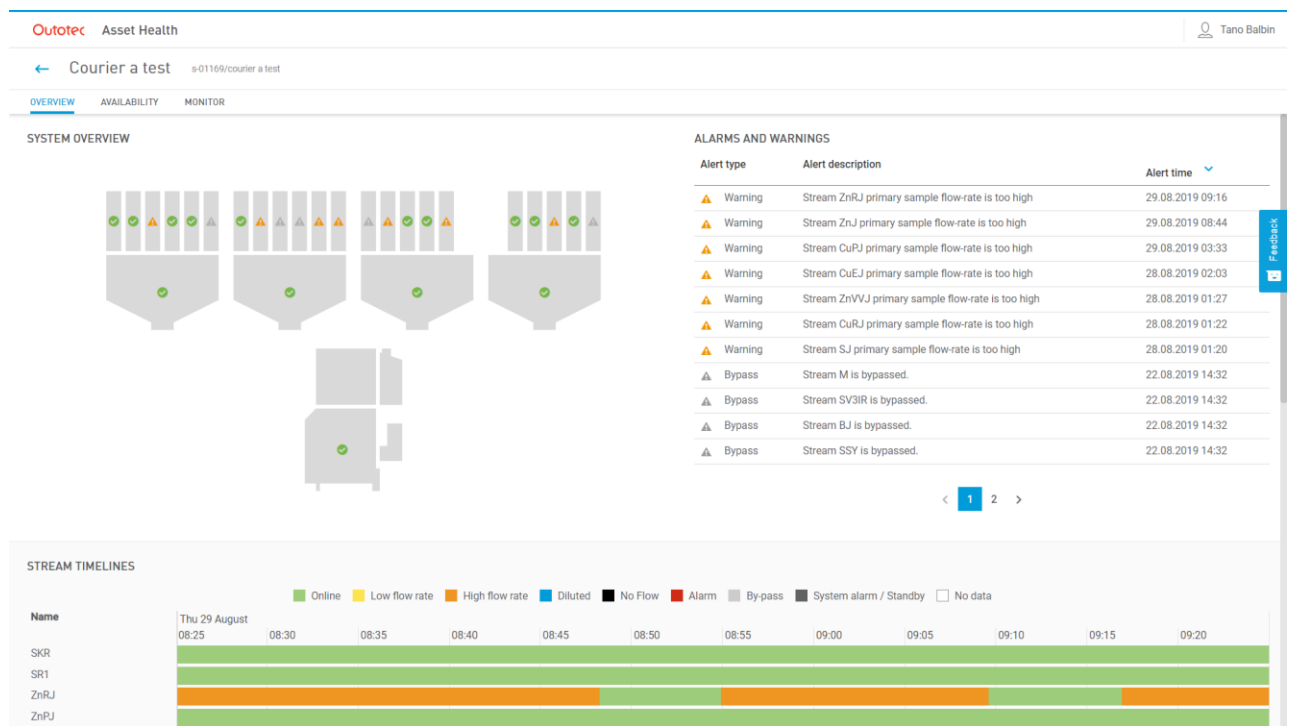

The availability to obtain the history of equipment utilization as well as downtime with reasons, start time, duration and description of the event.

Monitor

The monitor feature provides various equipment trends such as diagnostics, flow rates, temperature and troubleshooting in a graphical format

Create View

This feature allows users to create customized views based on their requirements by means of a simple drag and drop function from a menu.

System overview detailing timelines, equipment measurements and active alarms and warnings
